TECHNICAL SKILLS

HTML5, CSS3
Javascript, Typescript
React
Angular
State Management
Components
Testing
Optimizing Performance
APIs (GraphQL, Rest)
Git, VSCode
Agile (JIRA, Scrum, Kanban)

SOFT SKILLS

Proactive
Communication
Problem Solving
Time Management
Adaptable

LANGUAGES

English - Native
Spanish - Conversational

PROFILE

Travel enthusiast who loves to spend my time in Latin America. Life has been a great adventure since I learned to code. When it comes to work, I love tackling interesting challenges that lead to growth. Dove all in on knowing coding and starting from the ground up and have built myself into an experienced Front End developer. I feel like I've maximized and optimized what I can do in my previous roles and I'm ready to dig deeper and gain some new experiences.

Would love to work on exciting React-based projects and/or with experienced developers.

WORK EXPERIENCE

FRONT-END DEVELOPER
SUNRIDER - 11/2015 - CURRENT

• Developed the Front End of several applications over the years using Angular and React as a lead developer
• Maintained CI/CD pipelines that facilitate the automation of building, testing and deploying applications
• Performed code reviews to ensure only efficient code got into the codebase, minimizing the need for heavy refactoring
• Wrote automated integration and unit tests that run whenever commits hit the CI/CD pipeline, eliminating a large amount of bugs
• Utilized performance testing tools, minimizing load sizes and increasing page load speeds

SOTFWARE DEVELOPER
CARD.com - 05/2014 - 06/2015

• Participated in the development of the card ordering process for main company website, which had 1000 card orders per day

WORK EXPERIENCE

• Assisted with the front end development of the company website
• Created widgets and tools for our call center employees to be more productive through the Zendesk platform, reducing the questions they needed to ask
• Worked with MySQL daily to resolve edge cases, assist with fraud investigations, catching numerous scammers in the process
• Wrote scripts that ran in jobs every 24hrs, resolving bottlenecks of hundreds of card orders that were stuck somewhere in the initiation process

PROJECTS

FANCYLINGO

Description
Language learning application I built as inspiration from my traveling experiences, trying to learn the basics of a language quickly. My friends and I wanted something that only has the most common words already organized into different sets. Set up a working prototype with a design and functionality with apis already connected.

Stack
Expo, React Native, React Native Paper (Material design), Firebase (authentication and cloud functions), Hasura (database), GraphQL (for the content api).

EDUCATION

2014 - Web Development Immersive
General Assembly, Los Angeles

2008-2010 - Bachelor's in Marketing
California State University, Dominguez Hills
